**Linguistics / Psychology**

**Progress in Colour Studies**

**Volume II. Psychological aspects**

Edited by Nicola Pitchford and Carole P. Biggam

University of Nottingham / University of Glasgow

The study of colour attracts researchers from a wide range of disciplines from both the sciences and the arts. Along with its companion volume, *Progress in Colour Studies 1: Language and Culture*, this book offers a fascinating insight into current issues and research into colour. Most of the papers originated in a 2004 conference entitled 'Progress in Colour Studies' held in the University of Glasgow, U.K. Some additional invited papers are included from investigators exploring new and exciting avenues of colour research. The contributions to both books represent reviews of state-of-the-art colour research in various disciplines, and some new research findings are reported. This volume, principally psychological in content, focuses on the development of colour perception and colour language, from infancy into adulthood, across a diverse range of cultures, including English, Himba, Chinese, and Mexican, and on the intriguing yet perplexing condition of synaesthesia, thus bridging research from the physiology, psychology and anthropology of colour.

**Table of contents**

Preface
Dr Robert E. MacLaury 1944–2004: An Appreciation
Terri MacKeigan and Christopher Sinha

Abbreviations

Section 1: Theoretical approaches
Explanation(s) and the patterning of basic colour words across languages and speakers
Don Dedrick
Re-assessing perceptual diagnostics for observers with diverse retinal photopigment genotypes
Kimberly A. Jameson, David Bimler and Linda M. Wasserman
Hue categorization and color naming: Physics to sensation to perception
Marc H. Bornstein

Section 2: Developmental and cultural aspects
Infant colour perception and discrete trial preferential looking paradigms
Davida Y. Teller, Maria Pereverzeva and Iris Zemach
The rivalry between colour and spatial attributes in infant response to the visual field
Di Catherwood
Converging evidence for pre-linguistic colour categorization
Anna Franklin and Ian R.L. Davies

Colour categorization in preschoolers
Valeriere Bonnardel and Nicola Pitchford

The developmental acquisition of basic colour terms
Nicola Pitchford and Kathy T. Mullen

Colour categories and category acquisition in Himba and English
Debi Roberson, Jules Davidoff, Ian R.L. Davies and Laura R. Shapiro

Sex differences in colour preference
Yazhu Ling, Anya Huribert and Lucy Robinson

Section 3: Cognitive and emotional aspects
Colour associations in the Mexican university population
Lilia Roselia Prado-León, Rosalio Avila-Chaurand and Rosa Amelia Rosales-Cinco

Synaesthesia, neurology and language
Christian J. Kay and Catherine Mulvenna

“...I learned much from this volume. The field of colour is much greater than that to which I pay the most attention. Only through meetings like PICS and volumes like this can we hope to learn the different points of view of researchers from other disciplines and provide a more integrated understanding of colour as part of our psyche and a part of our world.”

Ken Knoblauch, 2006
